EXAMPLES

Find the area of the shaded region. Assume all lines that appear to be parallel are parallel. Round to the nearest tenth if necessary.

<p>Transformation</p>	<ul style="list-style-type: none"> A transformation is an operation that maps an original figure called the <u>pre image</u> onto a new figure called the <u>image</u>. A transformation can change the <u>size</u>, <u>position</u>, or <u>orientation</u> of a figure. There are four types of transformations: <u>reflection</u>, <u>translation</u>, <u>rotation</u>, and <u>dilation</u>.
